

**PA-42, Photo Adapter Installation Instruction**

To install the Photo Adapter please follow these steps:

- 1) Unscrew the ocular (eyepiece) from the monocular, by turning it counterclockwise.
- 2) Insert the Photo Adapter into the monocular as shown in the diagram. Screw in the adapter by turning it clockwise.
- 3) The monocular now is ready to be connected to the camera. If your camera requires a T-Ring, then you would connect it to the section labeled *B*, by turning the T-Ring clockwise.
- 4) Adjust the eyesight focus by rotating the middle section of the Photo Adapter labeled *A* on the diagram.

**WARNING:** Please observe the same precautions while operating the monocular attached to the camera as you would using it on its own. Avoid exposing the unit to direct light or daylight conditions. Intense light may cause permanent damage to the monocular.
