Pair & connect

connect and go

Note: Your keyboard pairs with any device that supports the Bluetooth HID profile. However, some functions may not be supported

1 Turn off any Bluetooth devices previously paired with your keyboard.

2 Turn on the Bluetooth feature on your Motorola Android device.

3 Turn on your keyboard (press and hold power ⏻ button).

The status light ●⏻ flashes slowly 3 times then becomes steadily lit.

Note: If you are prompted for a passkey on your Android device, enter **0000**.

When connected, the status light ●⏻ flashes 5 times, slowly pulses for 30 seconds then turns off.

For daily use, make sure your keyboard is turned on, and your device's Bluetooth feature is on. Your keyboard and device will connect automatically.

Note: To pair your keyboard with a computer, press and hold the **V**, **A**, and **R** keys while turning on the keyboard. Then follow the computer's instructions to complete pairing.

Reconnect with your Motorola Android device

When your keyboard becomes disconnected from your device, just press any key to reconnect.

While disconnected, your keyboard enters power saving mode. After one hour in this mode, the keyboards turns off automatically.

Reset to factory setting

Caution: This action erases all pairing information stored in your keyboard.

Press and hold the **N**, **E**, and **W** keys while turning on the keyboard. Both lights flash alternately and the keyboard enters Bluetooth discovery mode.
